Professional ASP.NET 2.0 Special Edition By Bill Evjen, Scott Hanselman, Devin Rader, Farhan Muhammad, Srinivasa Sivakumar

ASP.NET allows web sites to display unique pages for each visitor rather than show the same static HTML pages. The release of ASP.NET 2.0 is a revolutionary leap forward in the area of web application development. It brings with it a wealth of new and exciting built-in functions that reduce the amount of code you'll need to write for even the most common applications.

With more than 50 new server controls, the number of classes inside ASP.NET 2.0 has more than doubled, and in many cases, the changes in this new version are dramatic. This book will alert you to every new feature and capability that ASP.NET 2.0 provides so that you'll be prepared to put these new technologies into action. Greatly expanded from the original best-selling Professional ASP.NET 2.0, this new special edition adds hundreds of pages of new coverage of advanced and new techniques relating to data and data sources, the provider model, personalization, membership, role management, localization, configuration, migration, and Altas.
