Data Architecture: A Primer for the Data Scientist: Big Data, Data Warehouse and Data Vault By W.H. Inmon, Dan Linstedt

Today, the world is trying to create and educate data scientists because of the phenomenon of Big Data. And everyone is looking deeply into this technology. But no one is looking at the larger architectural picture of how Big Data needs to fit within the existing systems (data warehousing systems). Taking a look at the larger picture into which Big Data fits gives the data scientist the necessary context for how pieces of the puzzle should fit together. Most references on Big Data look at only one tiny part of a much larger whole. Until data gathered can be put into an existing framework or architecture it can't be used to its full potential. *Data Architecture a Primer for the Data Scientist* addresses the larger architectural picture of how Big Data fits with the existing information infrastructure, an essential topic for the data scientist.

Drawing upon years of practical experience and using numerous examples and an easy to understand framework. W.H. Inmon, and Daniel Linstedt define the importance of data architecture and how it can be used effectively to harness big data within existing systems. You'll be able to:

- Turn textual information into a form that can be analyzed by standard tools.
- Make the connection between analytics and Big Data
- Understand how Big Data fits within an existing systems environment
- Conduct analytics on repetitive and non-repetitive data
- Discusses the value in Big Data that is often overlooked, non-repetitive data, and why there is significant business value in using it
- Shows how to turn textual information into a form that can be analyzed by standard tools.
- Explains how Big Data fits within an existing systems environment
- Presents new opportunities that are afforded by the advent of Big Data
- Demystifies the murky waters of repetitive and non-repetitive data in Big Data

Editorial Review

About the Author

Dan has more than 25 years of experience in the Data Warehousing and Business Intelligence field and is internationally known for inventing the Data Vault 1.0 model and the Data Vault 2.0 System of Business Intelligence. He helps business and government organizations around the world to achieve BI excellence by applying his proven knowledge in Big Data, unstructured information management, agile methodologies and product development. He has held training classes and presented at TDWI, Teradata Partners, DAMA, Informatica, Oracle user groups and Data Modeling Zone conference. He has a background in SEI/CMMI Level 5, and has contributed architecture efforts to petabyte scale data warehouses and offers high quality on-line training and consulting services for Data Vault.

Users Review

From reader reviews:

Toby Terry:

Spent a free time and energy to be fun activity to try and do! A lot of people spent their free time with their family, or their very own friends. Usually they carrying out activity like watching television, about to beach, or picnic from the park. They actually doing same thing every week. Do you feel it? Do you want to something different to fill your current free time/ holiday? Could possibly be reading a book can be option to fill your no cost time/ holiday. The first thing that you will ask may be what kinds of e-book that you should read. If you want to attempt look for book, may be the e-book untitled Data Architecture: A Primer for the Data Scientist: Big Data, Data Warehouse and Data Vault can be excellent book to read. May be it might be best activity to you.

Michael Banks:

People live in this new time of lifestyle always make an effort to and must have the free time or they will get large amount of stress from both lifestyle and work. So , whenever we ask do people have time, we will say absolutely indeed. People is human not really a huge robot. Then we ask again, what kind of activity do you possess when the spare time coming to a person of course your answer may unlimited right. Then do you ever try this one, reading guides. It can be your alternative inside spending your spare time, the actual book you have read is usually Data Architecture: A Primer for the Data Scientist: Big Data, Data Warehouse and Data Vault.

Dione Wicker:

Data Architecture: A Primer for the Data Scientist: Big Data, Data Warehouse and Data Vault can be one of your beginning books that are good idea. We all recommend that straight away because this guide has good vocabulary that may increase your knowledge in vocabulary, easy to understand, bit entertaining but nevertheless delivering the information. The author giving his/her effort that will put every word into

enjoyment arrangement in writing Data Architecture: A Primer for the Data Scientist: Big Data, Data Warehouse and Data Vault however doesn't forget the main level, giving the reader the hottest as well as based confirm resource facts that maybe you can be one of it. This great information can drawn you into new stage of crucial considering.

Fred Martinez:

Many people spending their period by playing outside together with friends, fun activity having family or just watching TV all day long. You can have new activity to spend your whole day by examining a book. Ugh, you think reading a book can really hard because you have to bring the book everywhere? It alright you can have the e-book, bringing everywhere you want in your Mobile phone. Like Data Architecture: A Primer for the Data Scientist: Big Data, Data Warehouse and Data Vault which is getting the e-book version. So , try out this book? Let's see.
