## **Engineering Education : Research and Development in Curriculum and Instruction** By John Heywood

**A synthesis of nearly 2,000 articles to help make engineers better educators**

While a significant body of knowledge has evolved in the field of engineering education over the years, much of the published information has been restricted to scholarly journals and has not found a broad audience. This publication rectifies that situation by reviewing the findings of nearly 2,000 scholarly articles to help engineers become better educators, devise more effective curricula, and be more effective leaders and advocates in curriculum and research development.

The author's first objective is to provide an illustrative review of research and development in engineering education since 1960. His second objective is, with the examples given, to encourage the practice of classroom assessment and research, and his third objective is to promote the idea of curriculum leadership.

The publication is divided into four main parts:

- Part I demonstrates how the underpinnings of education—history, philosophy, psychology, sociology—determine the aims and objectives of the curriculum and the curriculum's internal structure, which integrates assessment, content, teaching, and learning
- Part II focuses on the curriculum itself, considering such key issues as content organization, trends, and change. A chapter on interdisciplinary and integrated study and a chapter on project and problem-based models of curriculum are included
- Part III examines problem solving, creativity, and design
- Part IV delves into teaching, assessment, and evaluation, beginning with a chapter on the lecture, cooperative learning, and teamwork

The book ends with a brief, insightful forecast of the future of engineering education. Because this is a practical tool and reference for engineers, each chapter is self-contained and may be read independently of the others.

Unlike other works in engineering education, which are generally intended for educational researchers, this publication is written not only for researchers in the

field of engineering education, but also for all engineers who teach. All readers acquire a host of practical skills and knowledge in the fields of learning, philosophy, sociology, and history as they specifically apply to the process of engineering curriculum improvement and evaluation.

### Editorial Review

#### Review

"...a convenient, well-organized compendium of what...literature has revealed, drawing on both American and English-language international journals...highly recommended." (*CHOICE*, April 2006)

#### From the Back Cover

A synthesis of nearly 2,000 articles to help make engineers better educators

While a significant body of knowledge has evolved in the field of engineering education over the years, much of the published information has been restricted to scholarly journals and has not found a broad audience. This publication rectifies that situation by reviewing the findings of nearly 2,000 scholarly articles to help engineers become better educators, devise more effective curricula, and be more effective leaders and advocates in curriculum and research development.

The author's first objective is to provide an illustrative review of research and development in engineering education since 1960. His second objective is, with the examples given, to encourage the practice of classroom assessment and research, and his third objective is to promote the idea of curriculum leadership.

The publication is divided into four main parts:

- Part I demonstrates how the underpinnings of education—history, philosophy, psychology, sociology—determine the aims and objectives of the curriculum and the curriculum's internal structure, which integrates assessment, content, teaching, and learning
- Part II focuses on the curriculum itself, considering such key issues as content organization, trends, and change. A chapter on interdisciplinary and integrated study and a chapter on project and problem-based models of curriculum are included
- Part III examines problem solving, creativity, and design
- Part IV delves into teaching, assessment, and evaluation, beginning with a chapter on the lecture, cooperative learning, and teamwork

The book ends with a brief, insightful forecast of the future of engineering education. Because this is a practical tool and reference for engineers, each chapter is self-contained and may be read independently of the others.

Unlike other works in engineering education, which are generally intended for educational researchers, this publication is written not only for researchers in the field of engineering education, but also for all engineers who teach. All readers acquire a host of practical skills and knowledge in the fields of learning, philosophy, sociology, and history as they specifically apply to the process of engineering curriculum improvement and evaluation.

#### About the Author

**JOHN HEYWOOD**, is a Professorial Fellow Emeritus of Trinity College Dublin. He has an MSc in Engineering Education, and a doctorate from the University of Dublin. He was founding editor of the *International Journal of Technology and Design Education*. He has published widely and won several awards for his writings in the areas of engineering, science, and technology. Since 1973 he has been a regular

contributor to the ASEE/IEEE Frontiers in Education Conference.

## **Users Review**

### **From reader reviews:**

#### **Agnes Higa:**

Do you certainly one of people who can't read gratifying if the sentence chained in the straightway, hold on guys this aren't like that. This Engineering Education : Research and Development in Curriculum and Instruction book is readable by means of you who hate the perfect word style. You will find the info here are arrange for enjoyable reading through experience without leaving even decrease the knowledge that want to supply to you. The writer connected with Engineering Education : Research and Development in Curriculum and Instruction content conveys thinking easily to understand by a lot of people. The printed and e-book are not different in the articles but it just different by means of it. So , do you even now thinking Engineering Education : Research and Development in Curriculum and Instruction is not loveable to be your top checklist reading book?

#### **Marlene Childs:**

The publication untitled Engineering Education : Research and Development in Curriculum and Instruction is the publication that recommended to you to learn. You can see the quality of the e-book content that will be shown to anyone. The language that publisher use to explained their ideas are easily to understand. The article writer was did a lot of investigation when write the book, hence the information that they share to your account is absolutely accurate. You also could get the e-book of Engineering Education : Research and Development in Curriculum and Instruction from the publisher to make you more enjoy free time.

#### **Myrtie Hammond:**

The particular book Engineering Education : Research and Development in Curriculum and Instruction has a lot of knowledge on it. So when you make sure to read this book you can get a lot of profit. The book was written by the very famous author. The author makes some research just before write this book. This particular book very easy to read you may get the point easily after perusing this book.

#### **Janet Warren:**

Engineering Education : Research and Development in Curriculum and Instruction can be one of your starter books that are good idea. Many of us recommend that straight away because this guide has good vocabulary that may increase your knowledge in vocabulary, easy to understand, bit entertaining but still delivering the information. The copy writer giving his/her effort to set every word into satisfaction arrangement in writing Engineering Education : Research and Development in Curriculum and Instruction however doesn't forget the main position, giving the reader the hottest and based confirm resource details that maybe you can be among it. This great information can easily drawn you into fresh stage of crucial contemplating.
