Advanced Calculus of Several Variables (Dover Books on Mathematics) By C. H. Edwards Jr.

In this high-level treatment, the author provides a modern conceptual approach to multivariable calculus, emphasizing the interplay of geometry and analysis via linear algebra and the approximation of nonlinear mappings by linear ones. At the same time, the book gives equal attention to the classical applications and computational methods responsible for much of the interest and importance of this subject.

Beginning with a discussion of Euclidean space and linear mappings, Professor Edwards (University of Georgia) follows with a thorough and detailed exposition of multivariable differential and integral calculus. Among the topics covered are the basics of single-variable differential calculus generalized to higher dimensions, the use of approximation methods to treat the fundamental existence theorems of multivariable calculus, iterated integrals and change of variable, improper multiple integrals and a comprehensive discussion, from the viewpoint of differential forms, of the classical material associated with line and surface integrals, Stokes' theorem, and vector analysis. The author closes with a modern treatment of some venerable problems of the calculus of variations.

Intended for students who have completed a standard introductory calculus sequence, the book includes many hundreds of carefully chosen examples, problems, and figures. Indeed, the author has devoted a great deal of attention to the 430 problems, mainly concrete computational ones, that will reward students who solve them with a rich intuitive and conceptual grasp of the material.

From reader reviews:

Traci Farris:

What do you in relation to book? It is not important along? Or just adding material if you want something to explain what you problem? How about your spare time? Or are you busy individual? If you don't have spare time to complete others business, it is give you a sense of feeling bored faster. And you have spare time? What did you do? All people has many questions above. They need to answer that question simply because just their can do that will. It said that about reserve. Book is familiar in each person. Yes, it is proper. Because start from on guardería until university need this kind of Advanced Calculus of Several Variables (Dover Books on Mathematics) to read.

Enrique Hayes:

People live in this new moment of lifestyle always try and and must have the spare time or they will get great deal of stress from both way of life and work. So , when we ask do people have time, we will say absolutely of course. People is human not really a huge robot. Then we request again, what kind of activity do you have when the spare time coming to you of course your answer may unlimited right. Then do you ever try this one, reading guides. It can be your alternative within spending your spare time, typically the book you have read is usually Advanced Calculus of Several Variables (Dover Books on Mathematics).

Courtney Osteen:

Do you one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Try to pick one book that you find out the inside because don't evaluate book by its deal with may doesn't work is difficult job because you are frightened that the inside maybe not seeing that fantastic as in the outside appearance likes. Maybe you answer is usually Advanced Calculus of Several Variables (Dover Books on Mathematics) why because the fantastic cover that make you consider with regards to the content will not disappoint an individual. The inside or content is actually fantastic as the outside or even cover. Your reading 6th sense will directly direct you to pick up this book.

Douglas Gibson:

What is your hobby? Have you heard that will question when you got college students? We believe that that query was given by teacher on their students.
