Sustainable Engineering: Concepts, Design and Case Studies By David T. Allen, David R. Shonnard

Assessing Engineering Designs for Environmental, Economic, and Social Impact

Engineers will play a central role in addressing one of the twenty-first century's key challenges: the development of new technologies that address societal needs and wants within the constraints imposed by limited natural resources and the need to protect environmental systems.

To create tomorrow's sustainable products, engineers must carefully consider environmental, economic, and social factors in evaluating their designs. Fortunately, quantitative tools for incorporating sustainability concepts into engineering designs and performance metrics are now emerging. *Sustainable Engineering* introduces these tools and shows how to apply them.

Building on widely accepted principles they first introduced in *Green Engineering*, David T. Allen and David R. Shonnard discuss key aspects of designing sustainable systems in any engineering discipline. Their powerful, unified approach integrates essential engineering and quantitative design skills, industry perspectives, and case studies, enabling engineering professionals, educators, and students to incorporate sustainability throughout their work. Coverage includes

- A concise review of the natural resource and environmental challenges engineers face when designing for sustainability
- Analysis and legislative frameworks for addressing environmental issues and sustainability
- Methods for identifying green and sustainable materials
- Principles for improving the sustainability of engineering designs
- Tools for evaluating sustainable designs and monetizing their benefits

Sustainable Engineering: Concepts, Design and Case Studies By David T. Allen, David R. Shonnard **Bibliography**

- Rank: #535322 in Books
- Brand: Brand: Prentice Hall
- Published on: 2011-12-30
- Released on: 2011-12-20
- Original language: English
- Number of items: 1
- Dimensions: 9.00" h x .60" w x 6.90" l, .80 pounds
- Binding: Paperback
- 240 pages

Editorial Review

About the Author

Dr. David T. Allen is the Gertz Regents Professor of Chemical Engineering, and the director of the Center for Energy and Environmental Resources, at the University of Texas at Austin. He is the author of multiple books and hundreds of scientific papers in areas ranging from coal liquefaction and heavy oil chemistry to the chemistry of urban atmospheres. The quality of his work has been recognized by research awards from the National Science Foundation, the AT&T Foundation, the American Institute of Chemical Engineers, the Association of Environmental Engineering and Science Professors, and the State of Texas. The findings from his research have been used to guide air quality policy development, and he has served on the U.S. EPA's Science Advisory Board and the National Research Council's Board on Environmental Studies and Toxicology, addressing issues at the interface between science, engineering, and public policy. For the past two decades, his work has also focused on the development of materials for environmental education, including coauthoring the textbook *Green Engineering: Environmentally Conscious Design of Chemical Processes*. He has won teaching awards at the University of Texas and UCLA. Dr. Allen received his B.S. in chemical engineering, with distinction, from Cornell University in 1979. His M.S. and Ph.D. degrees in chemical engineering were awarded by the California Institute of Technology in 1981 and 1983. He has held visiting faculty appointments at the California Institute of Technology, the University of California, Santa Barbara, and the Department of Energy.

Dr. David R. Shonnard is Robbins Professor in the Department of Chemical Engineering at Michigan Technological University and director of the Sustainable Futures Institute. He received a B.S. in chemical/metallurgical engineering from the University of Nevada, Reno, in 1983; an M.S. in chemical engineering from the University of California, Davis, in 1985; a Ph.D. from the University of California, Davis, in 1991; postdoctoral training in bioengineering at the Lawrence Livermore National Laboratory from 1990 to 1993; and he was a visiting instructor at the University of California at Berkeley in 2003. His experiences in life-cycle assessment (LCA) methods and applications include a one-year sabbatical at the Eco-efficiency Analysis Group at BASF AG in Ludwigshafen, Germany. He has been on the faculty in the Department of Chemical Engineering at Michigan Technological University since 1993. Dr. Shonnard has more than twenty years of academic experience in sustainability issues in the chemical industry and Green Engineering. He is coauthor of the textbook *Green Engineering: Environmentally Conscious Design of Chemical Processes*, published by Prentice Hall in 2002. His current research interests focus on investigations of new forest-based biorefinery processes for production of transportation fuels, such as cellulosic ethanol and pyrolysis-based biofuels, from woody biomass using recombinant DNA and other approaches. Another active research area is LCA of biofuels and other biorefinery products to determine greenhouse gas emissions and net energy balances. He has contributed to National Academy of Sciences publications on green chemistry/engineering/sustainability in the chemical industry. Dr. Shonnard has coauthored 70 peer-reviewed publications and received numerous honors and awards for teaching and research into environmental issues of the chemical industry, including the Ray W. Fahien Award from ASEE (2003). He is a recipient of the NSF/Lucent Technologies Foundation Industrial Ecology Research Fellowship (1998) for research that integrates environmental impact assessment with process design.

Users Review

From reader reviews:

Terry Kopp:

A lot of people always spent their own free time to vacation or maybe go to the outside with their friends and family or their friend. Do you realize? Many a lot of people spent their free time just watching TV, or even playing video games all day long. If you need to try to find a new activity this is look different you can read a book. It is really fun in your case. If you enjoy the book that you just read you can spent the entire day to reading a guide. The book Sustainable Engineering: Concepts, Design and Case Studies it is rather good to read. There are a lot of folks that recommended this book. These people were enjoying reading this book. In case you did not have enough space to deliver this book you can buy often the e-book. You can more easily to read this book through your smart phone. The price is not very costly but this book provides high quality.

Brandon Inouye:

Reading can called imagination hangout, why? Because if you find yourself reading a book mainly book entitled Sustainable Engineering: Concepts, Design and Case Studies your thoughts will drift away through every dimension, wandering in each aspect that maybe unidentified for but surely will end up your mind friends. Imaging every word written in a book then become one application form conclusion and explanation that maybe you never get previous to. The Sustainable Engineering: Concepts, Design and Case Studies giving you a different experience more than blown away your brain but also giving you useful info for your better life within this era. So now let us teach you the relaxing pattern this is your body and mind are going to be pleased when you are finished examining it, like winning a game. Do you want to try this extraordinary shelling out spare time activity?

Kerry Maye:

That e-book can make you to feel relax. This particular book Sustainable Engineering: Concepts, Design and Case Studies was multi-colored and of course has pictures on the website. As we know that book Sustainable Engineering: Concepts, Design and Case Studies has many kinds or variety. Start from kids until adolescents. For example Naruto or Private investigator Conan you can read and think you are the character on there. Therefore not at all of book usually are make you bored, any it can make you feel happy, fun and chill out. Try to choose the best book for yourself and try to like reading in which.

Anne Braden:

Publication is one of source of information. We can add our knowledge from it. Not only for students but in addition native or citizen want book to know the update information of year to help year. As we know those guides have many advantages. Beside most of us add our knowledge, also can bring us to around the world. Through the book Sustainable Engineering: Concepts, Design and Case Studies we can consider more advantage. Don't that you be creative people? To become creative person must love to read a book. Just choose the best book that appropriate with your aim. Don't always be doubt to change your life at this time book Sustainable Engineering: Concepts, Design and Case Studies. You can more appealing than now.
